Columbia science experiment data being analyzed

NASA scientists are continuing to assess the status of data received by experiments aboard Space Shuttle Columbia during its final mission. Columbia carried more than 80 experiments devoted to research, entrepreneurship and education. "For those experiments that received down-linked data during the mission, we estimate ... between 50-90 percent of the data was acquired," said David Liskowsky, program scientist for NASA's Office of Biological and Physical Research. Final results will be determined in the coming months.

IFMP Business Warehouse system unavailable

The Integrated Financial Management Program Business Warehouse system is unavailable for end user access until March 3. Data is being reloaded during this time to correct some identified problems and provide support to the Travel query requirement.
